

Break out Room 10

<p>In 2027, as a result of the work that's been done to reduce carbon emissions, what will be better about</p>	
<p>Your home?</p>	<p>Low energy - retrofitted Less packaging Easy to get food locally sourced, and to eat a plant-based diet Gardens - too much concrete and artificial grass. Neglected gardens. Open up front gardens Grants for garden renovation, education on the importance of gardens Oscar Newman - Defensible Space Green roof space - utilise flat concrete office space for office workers, communal space, wildlife</p>
<p>Your neighbourhood?</p>	<p>Better recycling - more opportunities to recycle Fewer cars and petrol/diesel cars rare - more/better/integrated public transport Local shops and local deliveries - locally supplied veg Easier cycling and walking - reduce the need to navigate a safe route Leave untidy areas on green space is beneficial to wildlife - need a change in values Remove the use of weedkillers - SCC uses Glyphosate Wildlife planting - pictorial meadows Ecochurch - raises awareness of green issues locally</p>

<p>Your city, town or village (depending where you live in South Yorkshire)?</p>	<p>Communal green space for nature Vegetable growing opportunities Helping people living in urban areas to feel connected to the wider ecology</p>
<p>Across South Yorkshire?</p>	<p>More green spaces - and birdsong! Cleaner air Natural flood defences Stop peat burning and much stronger legislation and regulation for game-bird shooting More trees and wilded areas - rewilding Yorkshire Fewer pesticides Cleaner rivers Encouraging people to engage with the countryside - skewed towards older white people. How do we engage BAME, young people How do we maintain the levels of engagement seen during COVID - how to appreciate the countryside - not taking disposable BBQ - fire risk Enjoy the local countryside or better public transport to the countryside - an integrated transport system - cycles can be on trams and more on trains - guards van People from different demographics more aware and taking action on climate change More insects as a result of rewilding and insecticide use More trees and wildlife on farms A clear action plan to net zero coordinated across Yorkshire - and acted on. Strategic leadership from MCAs and Councils Clear metrics in place to measure total carbon footprint across the region - Leeds University working on this (Andy Gouldson) Empowered and engaged community - need for net zero embedded in the popular narrative Reducing inequality and poverty - letting people enjoy better lives Valuing metrics other than GDP to measure progress and growth - less market driven Education</p>

How you spend your day?	More time to make connections. Less travel. Keep the benefits of COVID crisis. A better work life balance - combination of office and home working Eating less meat - healthier diet
